Project Information

Project Name	Import Data using Transform Maps (Spreadsheet)
Module / Topic	Transform Maps – Spreadsheet Data Import
Maximum Marks	

Import Data using Transform Maps:

The project demonstrates importing spreadsheet data into the target table using an Import Set and Transform Map. The process includes uploading the spreadsheet, mapping source fields to target fields, applying transformation rules, and validating the imported records.

Project team shall fill the following information in the Transform Map testing template.

S.No.	Parameter	Screenshot / Values
1	Spreadsheet Data Imported	Spreadsheet uploaded through Import Set
2	Data Preprocessing	Column headers checked; data validated and cleaned
3	Transform Map Configuration	Source fields mapped to target table fields
4	Field Mapping / Transformations	Field maps and transformation rules applied
5	Import Execution	Transform Map executed and records imported
6	Data Validation	Imported records verified in the target table
