

Project Design Phase

Proposed Solution Template

Date	30 September 2026
Team ID	SWTID-2026-5397
Project Name	Import Data using Transform Maps (Spreadsheet)
Team Size	5
Team Leader	LAVANYA S
Team Members	KAVIYA P; KEERTHANA J; LITHIKA P; MADHUMITHA R
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Organizations often need to import large amounts of spreadsheet data into a ServiceNow table. Manual entry is time-consuming, error-prone, and difficult to maintain. The solution addresses accurate and efficient bulk data loading.
2.	Idea / Solution description	Use a spreadsheet as the source file and configure a ServiceNow Import Set with a Transform Map. Source spreadsheet columns are mapped to the required target-table fields, and transformation logic is applied before records are inserted or updated.
3.	Novelty / Uniqueness	Provides a structured and reusable import process using field mapping and transformation rules. It reduces manual data entry and can handle recurring spreadsheet imports with consistent validation and data conversion.
4.	Social Impact / Customer Satisfaction	Improves data accuracy, saves staff time, reduces duplicate or incorrect records, and makes business data available faster. Users receive a more reliable and consistent data-management experience.
5.	Business Model (Revenue Model)	The solution can be offered as part of ServiceNow implementation, configuration, and support services. Revenue can come from project implementation, customization, training, maintenance, and recurring support.
6.	Scalability of the Solution	The approach can be reused for different tables, departments, and spreadsheet formats. Additional Transform Maps, validation rules, and scheduled imports can be added as data volume and organizational requirements grow.
