

PROJECT DOCUMENTATION

Import Data using Transform Maps (Spreadsheet)

PHASE 4 – FUTURE ENHANCEMENT & OPTIMIZATION

Date	01 October 2026
Team ID	SWTID-2026-5397
Team Size	5
Team Leader	LAVANYA S
Team Members	KAVIYA P, KEERTHANA J, LITHIKA P, MADHUMITHA R
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	1 Mark

Phase 4 Objective

This phase focuses on improving the spreadsheet data import process using Transform Maps, increasing data quality, reducing import errors, improving mapping accuracy, and preparing the solution for larger datasets and future automation.

Future Enhancements

S.No	Enhancement	Proposed Action	Expected Impact
1	Extend data source support	Allow additional spreadsheet formats and structured data sources to be used with the import process.	Flexible data import
2	Field validation	Add validation rules to check mandatory fields, formats, duplicates, and invalid values before records are inserted.	Higher data accuracy
3	Transform Map optimization	Review field mappings, transform scripts, and coalesce settings to improve mapping accuracy and processing speed.	Faster and reliable imports
4	Import monitoring	Maintain import logs and reports for successful, skipped, and failed records.	Better traceability
5	Error handling & recovery	Provide clear error messages and correction steps so failed spreadsheet records can be reprocessed safely.	Reduced import failures

Scalability Plan

Aspect	Current State	Future Plan
User Load	Suitable for current project users	Support larger groups and frequent import activities
Data Volume	Works with spreadsheet-based records	Optimize imports and transformations for larger datasets
Performance	Transform Map processes spreadsheet records	Minimize unnecessary scripts and processing steps
Data Quality	Basic mapping and validation	Add stronger validation, duplicate checks, and cleansing rules
Security	Controlled access to import features	Add role-based permissions and audit controls

Phase 4 Roadmap

Activity	Timeline	Status
Review current spreadsheet import and Transform Map	Week 1	Planned
Improve field mappings and validation rules	Week 2	Planned
Performance, error handling and security testing	Week 3	Planned
Final documentation and deployment review	Week 4	Planned

Final Outcome

A scalable and maintainable spreadsheet import solution using Transform Maps, with accurate field mapping, improved validation, better error handling, monitoring, performance, and readiness for future enhancements.
