Customer Problem Statement Template

Create problem statements from the customer's point of view. The statements below focus on common difficulties faced when importing spreadsheet data into a system using Transform Maps, especially data preparation, field mapping, and validation.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a system administrator	import employee/customer records from a spreadsheet into the system accurately	manual data preparation and incorrect field mapping can cause import errors or missing values	spreadsheet columns may not match the target table fields and data formats	frustrated and worried about incorrect records and repeated manual corrections
PS-2	a data entry or operations user	complete spreadsheet imports quickly and verify that every record is transferred correctly	duplicate records, invalid values, or failed rows may be difficult to identify after an import	the import process may lack clear validation, error reporting, and duplicate handling	uncertain and stressed because data quality problems can affect daily operations

Project Focus

Import Data using Transform Maps (Spreadsheet) aims to simplify the transfer of spreadsheet records into the target system by using Transform Maps to match source columns with destination fields, transform values where required, and identify invalid or duplicate data. The intended outcome is a faster and more reliable import process with fewer manual corrections.

Note: The problem statements are prepared in the format shown in the provided template image and are tailored to the given project topic.
